Dr. Joshua Lederberg  
Department of Genetics  
University of Wisconsin  
Madison 6

Dear Dr. Lederberg:

I have read your letter of March 1, 1951, with a great deal of interest, but field work has delayed my reply. I have only a few of the intermediate coliforms referred to in your letter. However, I do have additional intermediate forms which I have isolated from food products. You are perfectly welcome to any or all of these cultures if you will let me know how many you want and give me time to check their purity.

I shall have to ask one of my students about the cellobiose fermenters. He has just recently been characterizing some isolates and has that information in his own file at present. Inasmuch as he works in the laboratory only at night and on week-ends now, I shall not be able to contact him until Saturday. I shall let you know about the availability of such cultures in another letter.

During the Chicago meeting I would very much welcome the opportunity to talk with you about your work, if you expect to be there, and if the time can be arranged. As you know, I have been interested in the coliform group since I began my graduate studies, and fortunately I have been able to continue some of the work here. I have tried many times to convert coli into aerogenes and vice versa, but without any luck, although I have not tried your technique.

I shall attempt to get as complete a collection of reprints as are still available and send them to you under separate cover.

Yours very truly
